

Evaluation Report CCMC 12987-R Allura Lap Siding, Shapes Siding and Vertical Siding

 MASTERFORMAT:
 07 46 45.01

 Evaluation issued:
 2000-11-17

 Re-evaluated:
 2015-10-15

 Revised:
 2018-07-12

1. Opinion

It is the opinion of the Canadian Construction Materials Centre (CCMC) that "Allura Lap Siding, Shapes Siding and Vertical Siding", when used as an exterior cladding applied to walls of masonry or concrete, as well as, cementitious and wood sheathing boards that are attached to wood or steel framing, in new and retrofit construction in accordance with the conditions and limitations stated in Section 3 of this Report, complies with the National Building Code 2010:

- Clause 1.2.1.1.(1)(a), Division A, using the following acceptable solutions from Division B:
 - Sentence 5.6.1.1.(1), Required Protection from Precipitation
 - Sentence 9.27.1.1.(1), General (Cladding)
 - Sentence 9.27.1.1.(5), General (Cladding)
 - Clause 9.27.2.2.(1)(a), Minimum Protection from Precipitation Ingress (when installed in coastal areas)
 - Sentence 9.27.2.2.(2), Minimum Protection from Precipitation Ingress
 - Sentence 9.27.2.2.(5), Minimum Protection from Precipitation Ingress
 - Article 9.27.2.3., First and Second Plane of Protection
 - Article 9.27.3.1., Elements of the Second Plane of Protection
- Clause 1.2.1.1.(1)(b), Division A, as an alternative solution that achieves at least the minimum level of performance required by Division B in the areas defined by the objectives and functional statements attributed to the following applicable acceptable solutions:
 - Sentence 9.27.2.1.(1), Minimizing and Preventing Ingress and Damage

This opinion is based on CCMC's evaluation of the technical evidence in Section 4 provided by the Report Holder.

Ruling No. 03-14-103 (12987-R) authorizing the use of this product in Ontario, subject to the terms and conditions contained in the Ruling, was made by the Minister of Municipal Affairs and Housing on 2013-10-10 pursuant to s.29 of the Building Code Act, 1992 (see Ruling for terms and conditions). This Ruling is subject to periodic revisions and updates.

2. Description

The products are fibre cement planks, panels and shingles/shakes made mainly of hydraulic cement, silica, and other additives and reinforced integrally with cellulose fibres. The products are manufactured using the Hatschek process and steam autoclave. The products may be supplied with the surfaces textured or embossed. The products are mechanically fastened to the framing using corrosion resistance fasteners. The products are available in different lengths, widths, and thicknesses as described in Table 2.1.

Table 2.1 Description of "Allura Lap Siding, Shapes Siding and Vertical Siding"

| | Product | Width (mm) | Length (mm) | Thickness (mm) | |

| | | | 3 048 | | |

3. Conditions and Limitations

CCMC's compliance opinion in Section 1 is bound by "Allura Lap Siding, Shapes Siding and Vertical Siding" being used in accordance with the conditions and limitations set out below.

• The products are intended for use as exterior cladding in new and retrofit construction, applied to vertical walls of masonry or concrete, as well as on cementitious and wood sheathing boards that are attached to wood or steel framing, in new and retrofit construction.

- The products are permitted in the construction of buildings required to be of combustible or noncombustible construction in accordance with Article 3.1.5.1., Noncombustible Materials, of Division B of the NBC 2010.
- At least one layer of wall sheathing membrane conforming to Article 9.27.3.2., Sheathing Membrane Material Standard, of Division B of the NBC 2010 must be applied beneath the cladding products.
- The products are not suitable for use as a structural sheathing for bracing purposes.
- The products should terminate at least 200 mm above grade level.
- The products must be installed with a minimum 10-mm air space, in both coastal and non-coastal areas as defined by Sentence 9.27.2.2.(5) of Division B of the NBC 2010, in conformance with Articles 9.27.5.3., Furring, and 9.27.5.4., Size and Spacing of Fasteners, and Sentence 9.27.5.7.(2), Penetration of Fasteners, of Division B of the NBC 2010, and in conjunction with a minimum vented air space or capillary break of 10 mm conforming to Clause 9.27.2.2.(1)(a) and Sentence 9.27.2.2.(2) of Division B of the NBC 2010.
- The possibility of moisture accumulation within the wall construction is mainly a function of the ability of the wall assembly to deflect bulk water entry; the physical properties of the cladding being installed and its impact on the thermal, air leakage and vapour diffusion characteristics of the existing wall must be in accordance with Appendix Note A-5.1.2.1.(1), Application (Environmental Separation), of Division B of the NBC 2010.
- The requirements of the NBC 2010 regarding fire stops must be implemented.
- The products must be installed with suitable flashing to drain any incidental water from the drainage cavity to the exterior and to protect the exposed top edge of the cladding.
- The product must be installed in conjunction with materials conforming to Articles 9.27.3.7., Flashing Materials, and 9.27.4.2., Materials (Sealants), and installed in conformance with Articles 9.27.3.8., Flashing Installation, and 9.27.4.1., Required Sealants, of Division B of the NBC 2010.
- The attachment of the product must be in conformance with Sentence 9.27.5.1.(1), Attachment, and Articles 9.27.5.5., Fastener Materials, of Division B of the NBC 2010.
- The product must be installed in accordance with the manufacturer's current instructions. A high level of quality control at all stages of the exterior wall construction is imperative for obtaining an acceptable performance.
- The installation of the "Lap Siding" and "Shapes Siding" products is limited to geographical areas where the hourly wind pressures, based on a probability of being exceeded in any one year of 1:50, are less than 0.65 kPa.
- The installation of the "Vertical Siding" product is limited to geographical areas where the hourly wind pressures, based on a probability of being exceeded in any one year of 1:50, are less than 0.55 kPa.
- This Evaluation Report is applicable only to products identified with the following phrase: "CCMC 12987-R."

4. Technical Evidence

The Report Holder has submitted technical documentation for CCMC's evaluation. Testing was conducted at laboratories recognized by CCMC. The corresponding technical evidence for this product is summarized below.

4.1 General (Dimensional Tolerances)

The dimensional measurements of products are summarized in Tables 4.1.1, 4.1.2 and 4.1.3.

Table 4.1.1 Results of Dimensional Measurement of "Lap Siding"

| | | | Lap Siding | | | | | | | | | | | | | |
|--------------------------|-------------|------|------------|--------------|-----|------|------------|------|-------|--------|--------|------|------------------|---------------------------|--------------------------|------|
| Property | Requirement | | Smooth | | | | | | Cedar | | | | Beaded Smooth | Textured Beaded Lap | Textured Dutch Lap | |
| | | | | | | | | | Widtl | of Sid | ing (n | ım) | | | | |
| | | 133 | 159 | 184 | 210 | 235 | 305 | 133 | 159 | 184 | 210 | 235 | 305 | 184 | 184 | 210 |
| Length (mm) | ± 3.0 | 0.4 | -1.6 | 8.4 <u>1</u> | 0.6 | 2.4 | -3.6^{1} | -1.6 | -0.6 | 0.4 | -2.4 | -1.9 | -1.6 | -2.6 | -4.6^{1} | -1.6 |
| Width (mm) | ± 3.0 | 0.6 | 0.3 | -1.9 | 0.5 | 1.1 | 0.2 | -0.4 | 0.3 | 0.9 | 0.3 | 0.0 | -0.8 | -0.8 | 0.5 | 2.5 |
| Thickness (mm) | ± 1.6 | -0.6 | -0.6 | -1.4 | 0.7 | -0.8 | -0.5 | -0.6 | -0.4 | -0.2 | -0.3 | -0.3 | -0.6 | 0.1 | 0.3 | -0.3 |
| Squareness (mm/m) | ± 4.0 | 0.0 | 0.0 | 0.0 | 0.0 | 0.0 | 0.0 | 0.0 | 0.0 | 0.0 | 0.0 | 0.0 | 0.0 | 0.0 | 0.0 | 0.0 |
| Edge Straightness (mm/m) | ± 2.6 | 0.0 | 0.0 | 0.0 | 0.8 | 0.0 | 0.0 | 0.0 | 0.0 | 0.0 | 0.8 | 0.0 | 0.0 | 0.0 | 0.0 | 0.0 |

Note to Table 4.1.1:

The product did not meet dimensional tolerance requirement in respect to its length. However, it should not affect the overall performance of the cladding.

Table 4.1.2 Results of Dimensional Measurement of "Shapes Siding"

| | | Shapes Siding | | | | | | | | | | |
|--------------------------|-------------|-----------------------|-----------------------------------|------|--|----------------|----------|-------------------|------|------|--|--|

Note to Table 4.1.3:

4.2 Prescriptive Requirements

Table 4.2.1 Results of Testing for Prescriptive Requirements of "Individual Shakes" and "Perfection Shingle" ("Shapes Siding")

| | | | Resi | ults | | |
|--|----------------------------|----------------------|--------------|------------------------|-------------------------|--|
| | Property | | | "Individual Shakes" | "Perfection Shingle" | |
| Water absorption (%) l | by mass | | ≤ 40 | 34 | 32 | |
| Density (kg/m³) | | | ≥ 950 | 1300 | 1307 | |
| Dimensional change: 7-day immersion to | | $XD^{\underline{1}}$ | .0.20 | -0.0006 | 0.0003 | |
| 14-day immersion at 30 | 14-day immersion at 30% RH | | < 0.20 | -0.0072 | 0.0000 | |
| FI 1.4 41 (MD) | ` | XD | > 7.0 | 9.4 | 14.9 | |
| Flexural strength (MPa | 1) | MD | > 7.0 | 14.1 | 17.9 | |
| Fastener pull-through r | esistance | | ≥ 163 | 614 | | |
| Water vapour transmis | Water vapour transmission | | Report Value | 3670 | 441 | |
| Freeze-thaw | loss of mass (%) | | ≤ 3.0 | 1.8 | -0.6 | |
| resistance | loss of flexural str | ength (%) | ≤ 15 | -29^{3} | $-1^{\frac{3}{2}}$ | |

The product did not meet dimensional tolerance requirement in respect to its length. However, it should not affect the overall performance of the cladding.

| Property | | | Results | | |
|----------------|-------------------------------|--|------------------------|-------------------------|--|
| | | Requirement | "Individual Shakes" | "Perfection Shingle" | |
| | no deleterious effects | _ | Pa | SS | |
| Watertightness | | No formation of any drops on underside | Pass | | |
| Warm water | loss of flexural strength (%) | < 15 | -24^{3} | -5^{3} | |
| resistance | no deleterious effects | _ | Pa | ss | |

Notes to Table 4.2.1:

- 1 XD refers to cross-machine direction of the product.
- <u>2</u> MD refers to machine-direction of the product.
- 3 Negative values indicate product gain strength.

4.3 Performance Requirements

Table 4.3.1 Results of Testing for Impact Resistance of "Textured Dutch Lap" ("Lap Siding")

| Impact Body | | Dynamic Mass (kg) | Energy (N·m) | Results |
|---------------------------------|------------|-------------------|--------------|-------------------|
| Safatu immed | | 50 | 100 | Pass |
| Safety impact | small hard | 1 | 10 | N/A ¹ |
| | large soft | 50 | 34 | Pass |
| Retention of performance impact | small soft | 30 | 60 | Fail ² |
| personance impact | small hard | 1 | 10 | N/A ¹ |

Notes to Table 4.3.1:

- $\underline{1}$ The test was not conducted due to the specimen failure in small soft test.
- 2 The product did not meet the retention of performance impact. For cladding that can be repaired or replaced easily, however, lower impact resistance values may be accepted.

Table 4.3.2 Description and Results of Testing for Wind Load Resistance $(Q_{50} < 0.65 \text{ kPa})$

| Product | Frame | Stud Spacing (mm) | Fastening | Rating (kPa) | Results |
|---------------------------------------|--|-------------------|---|-----------------|---------|
| Perfection Shingle (Shapes Siding) | wood studs 2×4 with 11-mm OSB | 406 | 51-mm 6D ring shank siding nails into sheathing | $Q_{50} < 0.65$ | Pass |
| 305-mm Cedar (Lap Siding) | wood studs 2×4 | 406 | 64-mm 6D ring shank siding nails into framing | $Q_{50} < 0.65$ | Pass |
| 235-mm Cedar (Lap Siding) | metal studs 16 gauge | 406 | # 8 41-mm ribbed bugle-head screws, blind nailed into framing | $Q_{50} < 0.65$ | Pass |
| Individual Shakes (Shapes Siding) | wood studs 2×4 with 11-mm OSB | 406 | 44-mm roofing nails, blind nailed into sheathing | $Q_{50} < 0.65$ | Pass |
